

Race Engine Challenge
Classic Rivals Class
Chevy vs Ford vs Mopar

2021 TECHNICAL RULES

If you are not sure how to interpret any rule, call Greg Finnican at 704-408-7356.

This contest WILL NOT use a cubic inch divider. Scored test RPM range is 3500-7000 RPM at 500 RPM's/second. Dyno correction factor will be SAE J607. Scores will be determined by averaging three of the best average HP dyno pulls out of up to the ten pulls permitted. The sum of the average corrected HP will determine the winner.

100 – ENGINE

Small block Chevy, Ford 9.5" deck height Windsor and small block Mopar. Power adders prohibited. Any method of artificially heating and/or cooling engine fluids, fuel, and/or air prohibited (not to include thermal or friction coatings). This includes, but is not limited to, heating and cooling by mechanical device such as an external cooler or radiator/heater exchanger, pre-heating or cooling of any fluids with an oil heater or fuel heater/cooler, or the addition of a temperature-altering device designed to cool or heat the incoming air charge by mechanical means such as an intercooler, chemical means such as a chemical to cool either the incoming air/fuel charge or intake manifold, or electrical means such as an electric oil heater inside or outside the engine. Aftermarket SFI spec 18.1 harmonic balancer is mandatory.

101 – DISPLACEMENT

410 cubic inch maximum, 400 cubic inch minimum. Cubic inch is calculated by bore x bore x stroke x 6.2832. Any part of a cubic inch is rounded up to the next highest inch, i.e. 408.3 = 409.

102 – ENGINE BLOCK

Any domestic OEM passenger car or commercially available aftermarket OEM replacement, cast iron or aluminum block permitted. Engine block must retain OEM cylinder bore spacing, deck height, block angle and stock lifter bores spacing.

103 – CRANKSHAFT

Any commercially available crankshaft permitted.

104 – CYLINDER HEADS

Commercially available 23° Chevy, 20° Ford, 18° Mopar with standard intake port height and location required. Porting or epoxy inside the original port casting permitted. Only modification to the exterior of the cylinder head is milling. Steel valves only. **HEADS TO BE USED MUST BE SUBMITTED FOR APPROVAL.**

105 – IGNITION

Distributor or coil on plug. No crank trigger. ECU and ignition components may be mounted either on the front or a plate attached to the flywheel side of the engine block and/or back of heads/intake manifold.

106 – CARBURETION

Single 4150 style four barrel style carb only. 1.780 inch maximum throttle bore diameter. Water or any other auxiliary fluid injection systems prohibited. Must be equipped with a single point rearward pull mechanical throttle linkage compatible with the dyno actuation linkage. **A bracket providing an anchor point for the dyno throttle cable and a compatible linkage ball is required at the pull point.**

All engines will utilize an electric fuel pump with regulator and supply line filter supplied by the dyno facility. Each engine builder utilizing a carburetor will determine the fuel pressure. Both single and dual feed applications will be given one (1) type 8 AN connection fuel line.

107 – FUEL INJECTION

Any style throttle body. 65 psi maximum supplied fuel pressure at dyno gauge. Water or any other auxiliary fluid injection systems prohibited. Must be equipped with a single point rearward-pull mechanical throttle linkage compatible with the dyno actuation linkage. **A bracket providing an anchor point for the dyno throttle cable and a compatible linkage ball is required at the pull point.**

Fuel pressure regulation will be provided by a system consisting of an electric fuel pump, regulator and supply line filter as part of the dyno fuel system. Fuel pressure will be set at 65 PSI maximum on the dyno fuel pressure gauge. Fuel pressure will be set prior to engine start up (engine off). This is a supply and return system. A single -10 AN fitting will be required for fuel hook-up to the fuel rails and a single -8 AN fitting will be required for the return fuel line. The use of a commercially available bolt on stand alone 4150 EFI throttle body unit is permitted.

108 – AIR SUPPLY

Provided by a plenum in the ceiling with air coming in at a 45 degree angle. No structure, deemed by the event management as designed to take advantage of air flow in the dyno room installation, is permitted.

109 – AIR FILTER

Not permitted. Structures such as ram tubes, velocity stacks, etc. attached to the inlet portion of the carburetor/fuel injection are permitted. Velocity stacks, ram tubes or other devices attached to the throttle body/carburetor limited to six (6) inches maximum.

110 – CAMSHAFT

53 MM cam journal limit.

111 – CAMSHAFT DRIVE

Three piece chain drive must be under the timing chain cover.

112 – LIFTERS

Any lifter type permitted. .904 diameter limit. Lift bushing permitted.

113 – ZERO LASH VALVE LIFT LIMIT

.700

114 – IDLE

Engine must be able to idle under 1,000 RPM's.

115 – INTAKE MANIFOLD

Engine must use a mass produced commercially available cast aluminum or composite manifold that is a direct bolt on. Internal porting of the manifold permitted. The only welding/epoxy permitted on the exterior is for installing injector bungs. Carb/TB spacer is limited to 1 inch (plus two gaskets). Water lines from the back of the manifold to the front permitted. Maximum thickness between intake manifold and cylinder heads of .125 inches. Intake manifold from another family of engine not permitted.

116– CONNECTING RODS

Steel.

117 – PISTONS AND RINGS

No smaller than 1 mm, 1 mm, 2 mm with **lateral gas ports only**.

118 – COMPRESSION RATIO LIMIT

11:5
